WHY INVEST IN PREVIOUSLY USED CNC TURNING EQUIPMENT

While many companies may prefer new Swiss-style CNC machines, there are several benefits to consider when purchasing used Swiss CNC turning equipment. Here are some advantages of opting for used machines:

COST SAVINGS: Used machines are typically more affordable compared to their new counterparts. By investing in a Peerless used Swiss CNC turning machine, companies can significantly reduce their upfront capital expenditure

while still achieving high-quality precision machining capabilities. Also may be just as simple as “When new is not in the budget!”

PROVEN RELIABILITY: Swiss CNC turning machines are known for their durability and long lifespan. Used machines that have been well-maintained can continue to deliver reliable performance, often with years of service life remaining. These machines have already proven their capabilities in the field and can be trusted to handle various turning operations effectively.

SHORTER LEAD TIMES: When purchasing a new Swiss-style CNC machine, there can be a waiting period for production, especially if the machine needs to be manufactured or customized according to specific requirements. Opting for a used Peerless machine allows for immediate availability, reducing lead times and enabling businesses to start production sooner.

REDUCED DEPRECIATION: CNC machines, like any other industrial equipment, experience depreciation over time. By purchasing a used machine, the initial depreciation has already occurred, and the rate of depreciation tends to be slower. This can be advantageous for companies concerned about preserving their investment value.

LOWER FINANCIAL RISK: Investing in a Peerless used Swiss CNC turning machine reduces the financial risk associated with a large capital investment. If a company is new to CNC machining or uncertain about long-term needs, purchasing a used machine can be a more financially prudent option. It allows businesses to test the waters and assess their specific requirements before committing to a brand-new machine.

ACCESS TO ADVANCED FEATURES AT A LOWER COST: Many Peerless used Swiss CNC turning machines can still offer advanced features and capabilities, depending on their age and model. Companies may find machines that have the necessary features for their specific applications at a more affordable price point than buying new. This can be particularly advantageous for businesses on a tight budget or those looking to expand their machining capabilities incrementally.

AVAILABILITY OF SUPPORT AND SERVICE: The market for used Swiss CNC turning machines is often accompanied by a robust ecosystem of service providers, technicians, and spare parts suppliers. Many manufacturers and dealers offer support and maintenance services for used machines, ensuring that businesses have access to expertise when needed. The Peerless team is the best in the nation for support, tooling and logistics.

It's important to note that when considering used machines, thorough inspection and evaluation should be conducted to assess the machine's condition, maintenance history, and overall suitability for specific requirements. The Peerless advantage: We do the upfront work FOR YOU so that you can feel confident in your used Swiss investment.
